

WRF-Chem:  
A Quick Review Of How To  
Set-Up & Run

Steven Peckham

# WRF-Chem

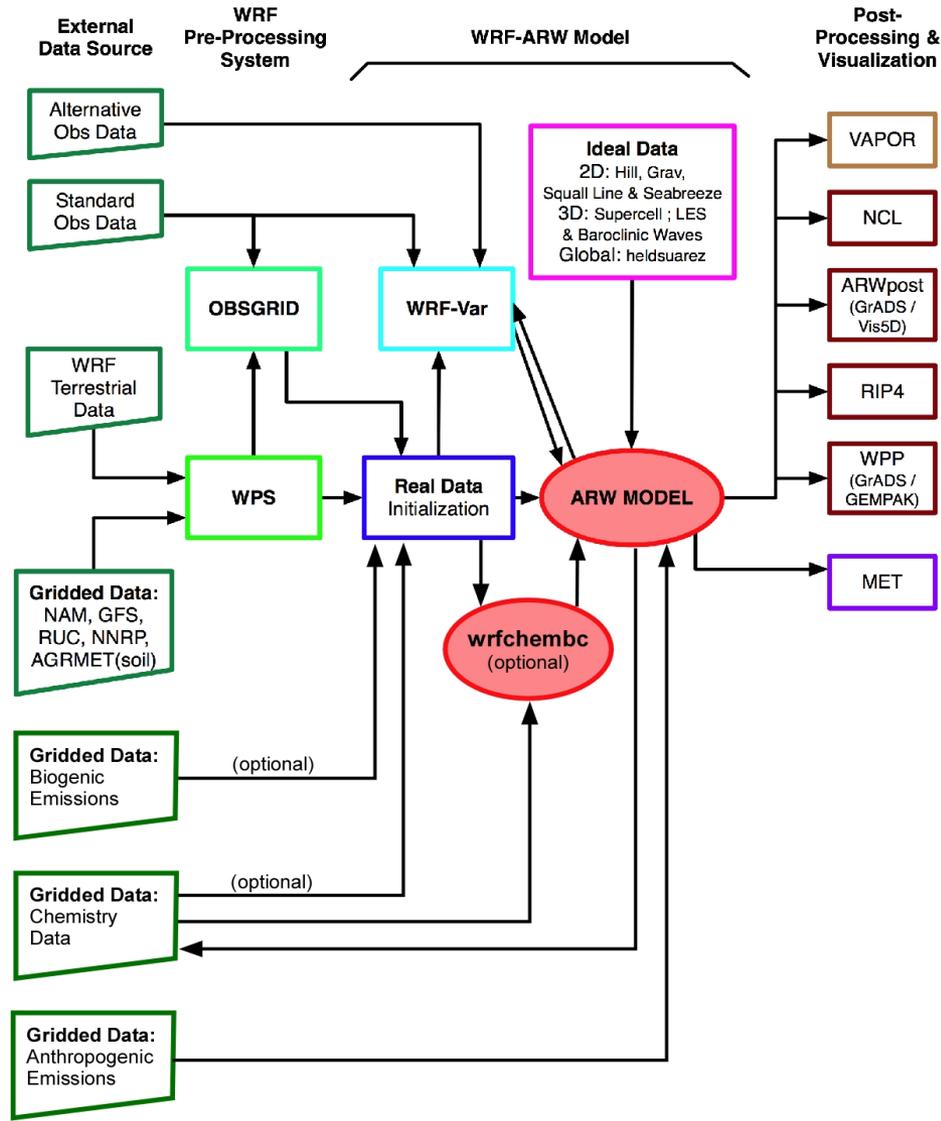

- It is assumed that the user of WRF-Chem :
  - is *very familiar* with the WRF model system
  - have run WPS
  - and has made more than one weather simulation using WRFV3
  - know FORTRAN and C and can edit code, recompile, etc.
- The chemistry code is available from WRF web page.
  - Questions: Send email to WRF-Chem help ([wrfchemhelp.gsd@noaa.gov](mailto:wrfchemhelp.gsd@noaa.gov))
  - Web page: [www.wrf-model.org/WG11](http://www.wrf-model.org/WG11)
- Test data is available as well (tutorial exercises)
  - Small domain (41x41x31 grid points, 100 km horiz. spacing)

# WRF-Chem

- Compile WRF-Chem code (already done for tutorial)
  - Set environmental variables
    - Define which model core to build (use ARW only).
      - `setenv WRF_EM_CORE 1`
      - `setenv WRF_NMM_CORE 0`
    - Chemistry code is to be included in the WRF model build
      - `setenv WRF_CHEM 1`
    - Kinetic Pre-Processor (KPP) code
      - `setenv WRF_KPP 1` => if KPP is to be included
      - `setenv WRF_KPP 0` => if KPP is NOT to be included
      - `setenv FLEX_LIB_DIR /usr/lib`
      - `setenv YACC '/usr/bin/yacc -d'`
  - Configure and issue “`compile em_real`” command
    - Save compile output to file
    - Check results for errors and check known problems web page if no `wrf.exe`

# WRF-Chem Emissions

WRF-ARW Modeling System Flow Chart

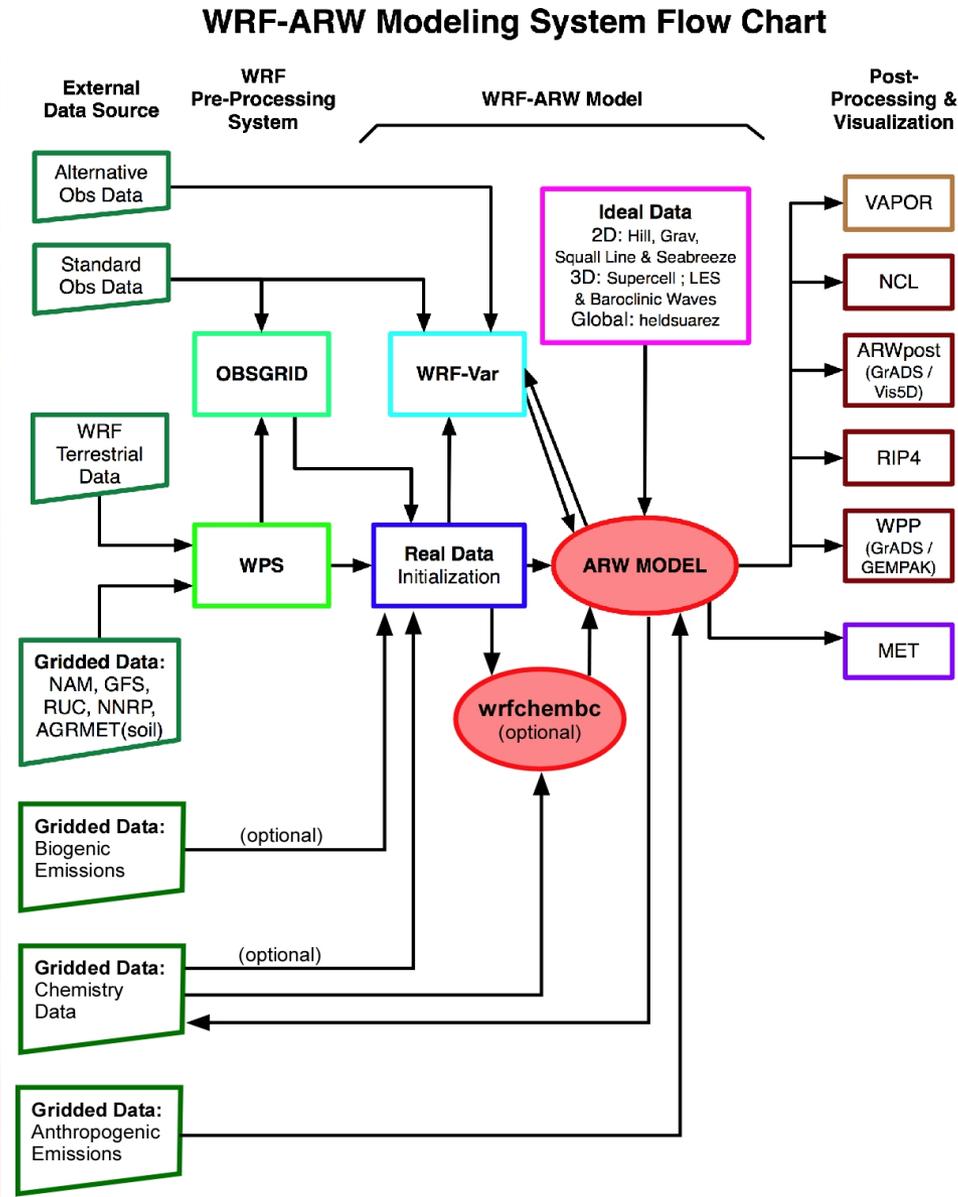

# WRF-Chem Emissions

- Two sources of anthropogenic emissions available on ftp site:
  - RETRO (.5 degree, monthly) and EDGAR (10 degree, annual)
    - Run Prep\_sources\_chem (Tutorial exercise 2)
  - National Emissions Inventory (NEI-2005) for U.S.
    - Run without chemistry first as mean wind profile is needed!
  - Both include programs to map to WRF grid; binary output files
- Can use other external emissions data
  - Start with “raw” emissions data
  - Specify the speciation for the desired chemical mechanism
  - Prepared the 3-D (or 2-D) anthropogenic emissions data set
    - Map data onto your WRF-Chem simulation domain
  - Output data
  - Goal: have data in a WRF data file to run with model

# WRF-Chem Emissions

- The “available” methodology for emissions uses a convert program
  - Program called `convert_emiss.exe` (compile `emi_conv`)
    - Reads header information from a WRF input file
    - Reads binary emissions data
    - Writes a WRF netCDF data file
- `convert_emiss` is very simple. Uses just a few namelist settings.
  - `emiss_opt=3` – NEI emissions for U.S.A.
  - `emiss_opt=5` – RETRO/EDGAR global emission
- Data is read in via `auxinput5` when running `wrf.exe`
  - `auxinput5_inname` = ‘`wrfchemi_<hr>z_d<domain>`’, (optional)
  - `io_form_auxinput5` = 2,
- Chpt. 3 and Appendix B of User’s Guide for more information
- Users can create input data files through any other methodology

# WRF-Chem Biogenic Emissions

# WRF-Chem

## Biogenic Emissions

- 4 choices for Biogenic emissions
- Option 1: No biogenic emissions ( $\text{bio\_emiss\_opt} = 0$ ):
  - Provide biogenic emissions through anthropogenic input.
  - No additional input data files.
- Option 2 ( $\text{bio\_emiss\_opt} = 1$ ): (good default option)
  - Landuse based emissions following Guenther et al (1993, 1994), Simpson et al. (1995). Emissions depends on both temperature and photosynthetic active radiation.
  - No additional input data files.
  - Small number of vegetation types (errors?)

# WRF-Chem

## Biogenic Emissions

- Option 3 (bio\_emiss\_opt = 2):
  - User specified from external data source
    - Biogenic Emissions Inventory System (BEIS) version 3.14 [*Vukovich and Pierce, 2002*] with land-use obtained from the Biogenic Emissions Landuse Database version 3 (BELD3) [*Pierce et al., 1998*].
  - Static 2-D surface data provided in input data file and are modified according to the environment
  - Data is read in via auxinput6 when running real.exe
    - auxinput6\_inname = 'wrfbiochemi\_d01',
    - io\_form\_auxinput6 = 2,

# WRF-Chem

## Biogenic Emissions

- Option 4 (bio\_emiss\_opt = 3): MEGAN (best choice?!)
  - Separate program made available by NCAR/ACD
  - Global data with base resolution of ~ 1 km
    - Leaf Area Index, vegetation type, emission factors
  - Steps:
    1. Download MEGAN code from NCAR/ACD
      - megan\_bio\_emiss.tar
      - megan.data.tar.  
(when uncompressed ~ 28 GB)

<http://acd.ucar.ued/~guenter/MEGAN/MEGAN.html>

# WRF-Chem

## Biogenic Emissions

- Option 4 (bio\_emiss\_opt = 3): MEGAN
  - Steps:
    2. Compile megan\_bio\_emiss
    3. Create wrfbiochemi\_d01 data file using:
      - wrfinput,
      - RAW MEGAN data files,
      - settings in megan\_bio\_emiss.input file
      - About 10 Gb of memory

# WRF-Chem

## Biogenic Emissions

- Option 4 (bio\_emiss\_opt = 3): MEGAN
  - Steps:
    4. View wrfbiochemi\_d01 data file to verify data is correct
    5. Run real.exe and wrf.exe
      - Add ne\_area setting to the WRF chemistry namelist!!!
        - » ne\_area = number of chemical species in chem\_opt

<http://acd.ucar.ued/~guenter/MEGAN/MEGAN.html>

# WRF-Chem

## Biomass Burning Emissions

- 2 choices for biomass burning emissions
- Option 1: No biomass emissions (`biomass_burn_opt = 0`):
  - No additional input data files.
- Option 2 (`biomass_burn_opt = 1`):
  - Use `prep_chem_sources` program to read WFABBA, or MODIS data
  - Convert binary data to `wrffirechemi_d01` input file
  - Data read in through `auxinput7` when running `real.exe`

# WRF-Chem

## Dust Emissions

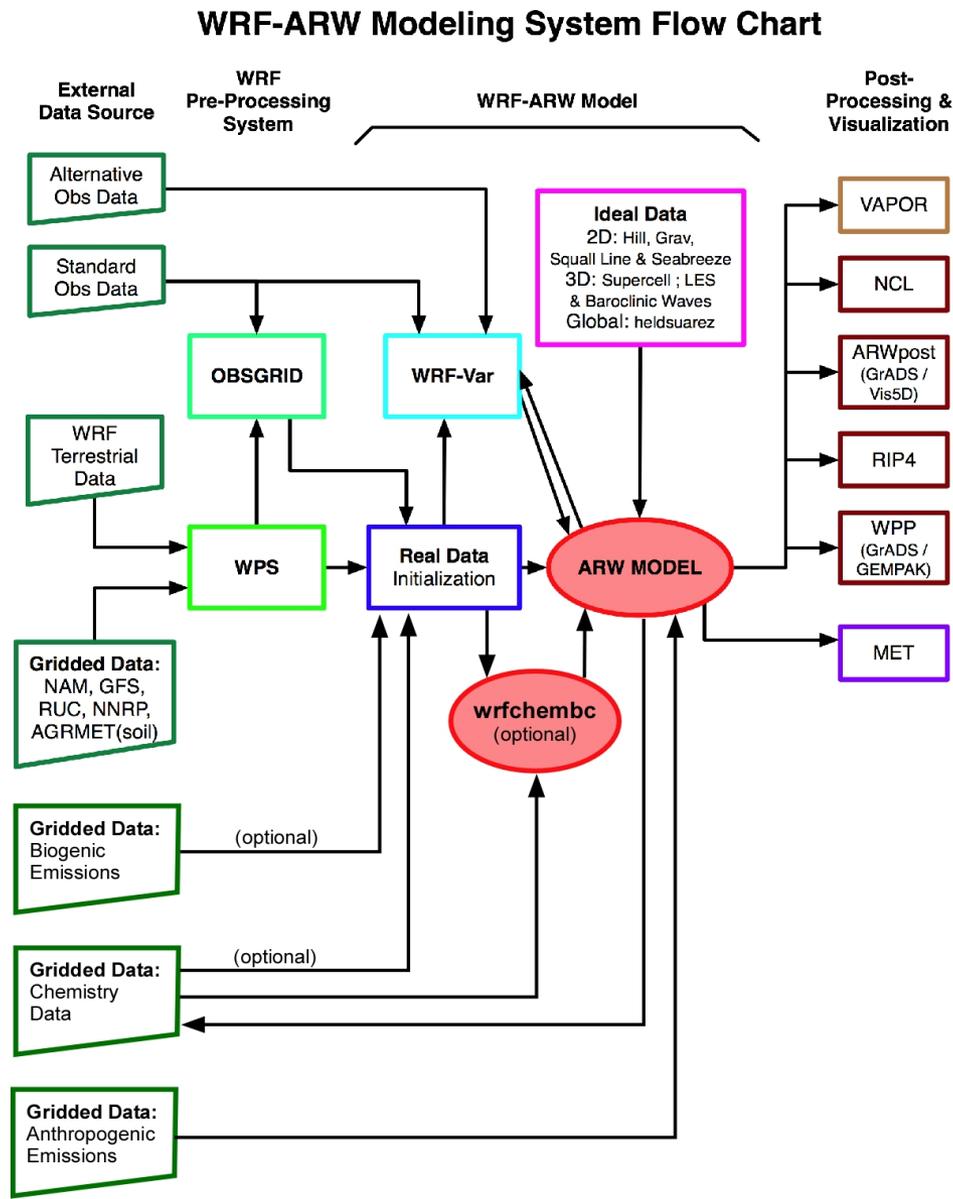

- 3 choices for dust emissions
- Option 1: No dust emissions ( $\text{dust\_opt} = 0$ ):
  - No additional input data files.
- Option 2 ( $\text{dust\_opt} = 1$ ):
  - Need to include surface erosion data in WPS
  - Use new GEOGRID table for running geogrid.exe
  - Dust data included in wrfinput file
- Option 3 ( $\text{dust\_opt} = 3$ )
  - AFWA scheme uses same method as option 2
- Work tutorial exercise 1 for more information.

# WRF-Chem

## GOCART Background Data

- Includes DMS as well as GOCART
  - From running `prep_chem_sources` with GOCART included
  - Planned to be moved to WPS one of these days
- Run `prep_chem_sources` program to produce external binary data files
- Convert binary data files to WRF input files
  - `chem_opt = 300` or `301` and/or `dmsemis_opt=1`
- Data read by `real.exe` through `auxinput8`
  - File name `wrfchemi_gocart_bg_d01`

# WRF-Chem Boundary Conditions

# WRF-Chem Chemistry B.C.s

- External tools under development to provide global model data as BC and initial conditions
- Test program available: wrfchembc (Rainer Schmitz - Univ. of Chile)
  - Available code runs with MPI-MATCH & RAQMS data
  - Adds lateral boundary data for chemical species to wrfbdy\_d01
  - User specifies which chemical species to use
    - Need to choose chemical species from global model
    - Need to speciate global model data for WRF-Chem chemistry
    - Requires knowledge from user regarding chemistry (not turn-key)
- wrfinput\_d01 not modified
  - Can result in differences near boundaries at start of simulation

# WRF-Chem Chemistry B.C.s

- Other groups are exploring other possible ways to generate input/B.C. data for WRF-Chem
  - NCAR/ACD has a program available if using MOZART
- MOZBC sets space and time-varying chemical initial (IC) and boundary conditions (BC)
  - global model output (MOZART-4 or CAM-Chem)

MOZBC : <http://www.acd.ucar.edu/wrf-chem/download.shtml>

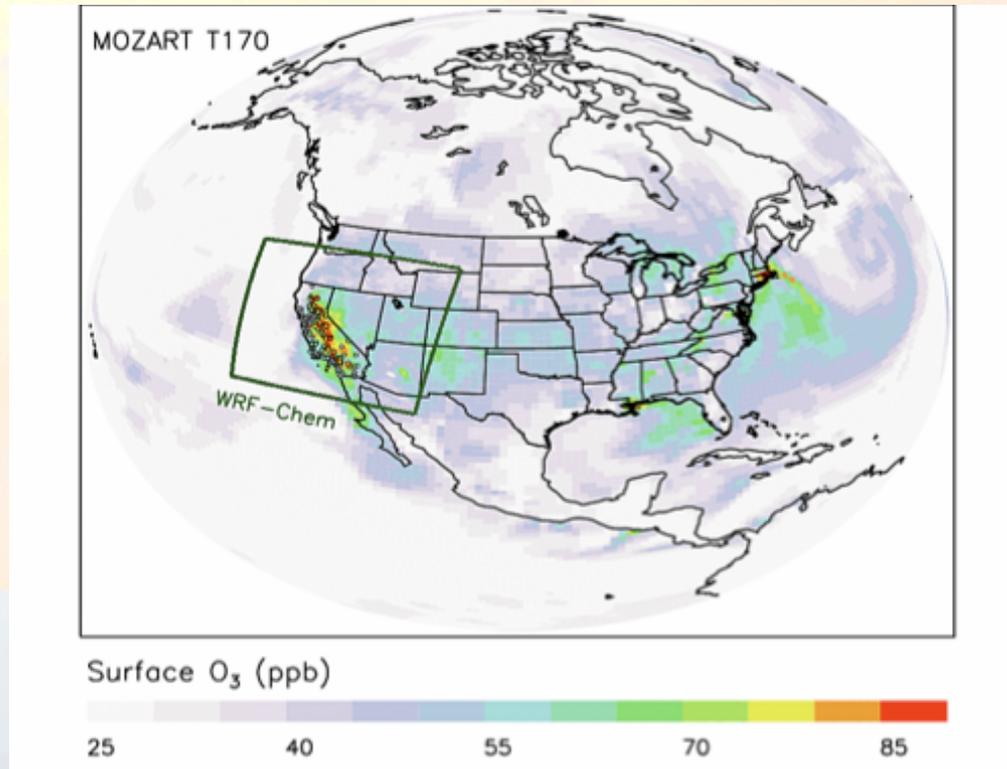

MOZART data (2004-2008):

<http://www.acd.ucar.edu/wrf-chem/mozart.shtml>

- Note: MOZART/CAM-Chem data are interpolated only in space.

# WRF-Chem Chemistry B.C.s

- Program will fill the chemical fields in your `wrfinput_d<nn>` and `wrfbdy_d<nn>` files with global model output.

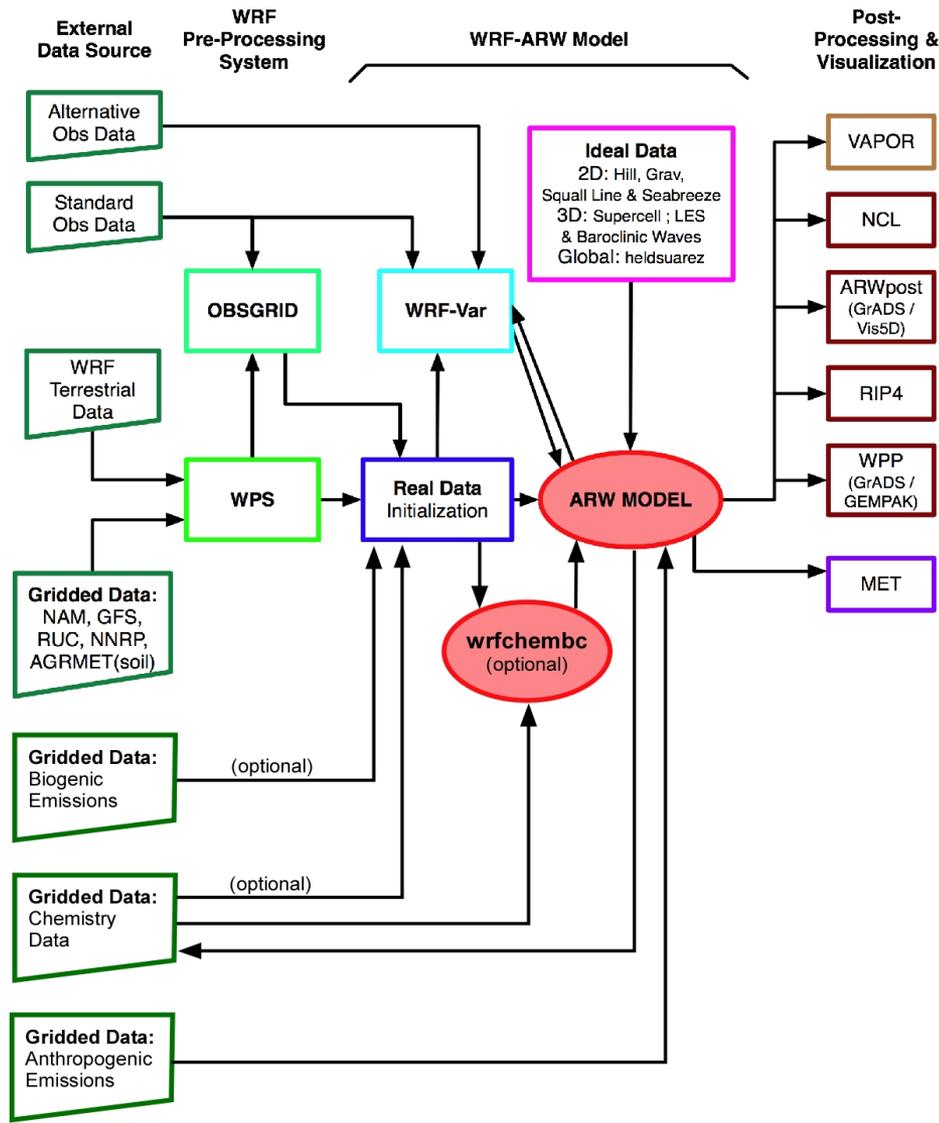

- To enable chemical IC and BC when running WRF-Chem set in `namelist.input`:  
*have\_bcs\_chem = .true.*

# WRF-Chem Chemistry B.C.s

- What if you have different GCM data?
- Methodology is the same
  - Read global model chemistry data
  - Skip over if not a desired chemistry species
  - Determine grid point location on WRF-Chem grid
  - If at boundary, interpolate data to WRF-Chem grid
  - Once completed reading/interpolating global data:
    - Open wrfbdy\_d01 data file
    - Write boundary data to wrfbdy\_d01

# WRF-Chem Namelist

WRF-ARW Modeling System Flow Chart

# WRF-Chem Namelist

- **Time control namelist options**
- A few of the chemistry related namelist options
  - More details provided in Chapter 4 of User's Guide

# WRF-Chem Namelist

- Time control namelist
  - Chemistry input fields come in through auxiliary input ports
  - Biogenic emissions use auxinput 6 for example

&time\_control

...

```
auxinput6_inname      = 'wrfbiochemi_d<domain>',  
auxinput6_interval_m = 1440,  
io_form_auxinput6    = 2,
```

## Recall:

### Defining a variable-set for an I/O stream

- **Fields are added to a variable-set on an I/O stream at compile-time with Registry**

#	Type	Sym	Dims	Use	Tlev	Stag	IO	Dname	Descrip
state	real	u	ikjb	dyn_em	2	X	i01rhusdf	"U"	"X WIND COMPONENT"

***IO*** is a string that specifies if the variable is to be subject to initial, restart, or history I/O. The string may consist of 'h' (subject to history I/O), 'i' (initial dataset), or 'r' (restart dataset). The 'h', 'r', and 'i' specifiers may appear in any order or combination.

The 'h' and 'i' specifiers may be followed by an optional integer string consisting of '0', '1', ..., '9'. Zero denotes that the variable is part of the principal input or history I/O stream. The characters '1' through '9' denote one of the auxiliary input or history I/O streams.

# WRF-Chem Registry

- Thus, in registry.chem

```
state real - i+jf emis_ant - - - - "Anthropogenic Emissions" ""
state real e_iso i+jf emis_ant 1 Z i5r "E_ISO" "Isoprene EMISSIONS" "mol km^-2 hr^-1"
state real e_so2 i+jf emis_ant 1 Z i5r "E_SO2" "EMISSIONS" "mol km^-2 hr^-1"
state real e_no i+jf emis_ant 1 Z i5r "E_NO" "EMISSIONS" "mol km^-2 hr^-1"

#
state real e_bio ijo misc 1 Z r "E_BIO" "EMISSIONS" "ppm m/min"
state real sebio_iso ij misc 1 - i6r "sebio_iso" "Reference biog emiss" "mol km^-2 hr^-1"
state real sebio_oli ij misc 1 - i6r "sebio_oli" "Reference biog emiss" "mol km^-2 hr^-1"

# additional arrays needed for biomass burning emissions input
state real - ijlf ebu_in - - - - "Biomass burnung input" ""
state real ebu_in_no ijlf ebu_in 1 - i{7} "ebu_in_no" "EMISSIONS" "mol km^-2 hr^-1"
state real ebu_in_co ijlf ebu_in 1 - i{7} "ebu_in_co" "EMISSIONS" "mol km^-2 hr^-1"

# Input for GOCART: Background chemistry, erodible surface emissions map
state real backg_oh ikj misc 1 - i8r "BACKG_OH" "Background OH" "volume mixing ratio"
state real backg_h2o2 ikj misc 1 - i8r "BACKG_H2O2" "Background H2O2" "volume mixing ratio"
```

# WRF-Chem Namelist

- For the chemistry variables to come in via auxiliary port
  - Registry set for input via auxiliary port

Auxiliary port number	Description
5	Anthropogenic emissions
6	Biogenic emissions
7	Surface biomass burning data
8	GOCART background fields
12	External chemistry fields (wrfout data from previous run)
13	Volcanic Ash emissions
14	Aircraft emissions
15	Green House Gas emissions

# WRF-Chem Namelist

- For the chemistry variables to come in via auxiliary ports (cont.)
  - Namelist set in time\_control

```
&time_control
...
auxinput6_inname = 'wrfbiochemi_d01',
auxinput7_inname = 'wrffirechemi_d<domain>',
auxinput8_inname = 'wrfchemi_gocart_bg_d<domain>',
auxinput12_inname = 'wrf_chem_input',
auxinput13_inname = 'wrfchemv_d<domain>',
auxinput5_interval_m = 86400, 86400, 60,
auxinput7_interval_m = 86400, 86400, 60,
auxinput8_interval_m = 86400, 86400, 60,
auxinput13_interval_m = 86400, 86400, 60,
io_form_auxinput2 = 2,
io_form_auxinput5 = 2,
io_form_auxinput6 = 0,
io_form_auxinput7 = 0,
io_form_auxinput8 = 0,
io_form_auxinput12 = 0,
io_form_auxinput13 = 0,
```

# WRF-Chem Namelist

## **A few of the chemistry namelist options**

- More details provided in Chapter 4 of WRF-Chem User's Guide

# WRF-Chem Namelist

- Chemistry control namelist

Chem_opt	Description
0	No chemistry
1 - 40	Chemical mechanisms (RADM2, CBMZ), tracer options (chem_opt=13 to 17)
101 - 200	Options covering RADM2, CBMZ, MOZART, SAPRC99, NMHC9 chemical mechanisms using KPP.
300 – 303	GOCART aerosol options
400 – 403	Dust and Volcano options (volcanic and surface lofted)
501 – 504	CBMZ and MAM aerosols (run with CAM5 physics)

# WRF-Chem Namelist

emiss_opt	Description
0	no anthropogenic emissions
2	use radm2 anthropogenic emissions
3	use radm2/MADE/SORGAM anthropogenic emissions
4	use CBMZ/MOSAIC anthropogenic emissions
5	GOCART RACM_KPP emissions
6	GOCART simple emissions
7	MOZART emissions .
8	MOZCART (MOZART + GOCART aerosols) emissions
13	SAPRC99 emissions
16	CO2 tracer emissions
17	Green House Gas emissions

# Remember: emiss\_opt sets emissions structure (registry.chem)

#emission package definitions

```
package eradmsorg    emiss_opt==3
emis_ant:e_iso,e_so2,e_no,e_no2,e_co,e_eth,e_hc3,e_hc5,e_hc8,e_xyl,e_ol2,e_olt,e_oli,e_tol,e_csl,e_hch

```
package eco2        emiss_opt==16    emis_ant:e_co2,e_co2tst,e_co
```

```
package eghg        emiss_opt==17    emis_ant:e_co2,e_co2tst,e_co,e_cotst,e_ch4,e_ch4tst
```

# WRF-Chem Namelist

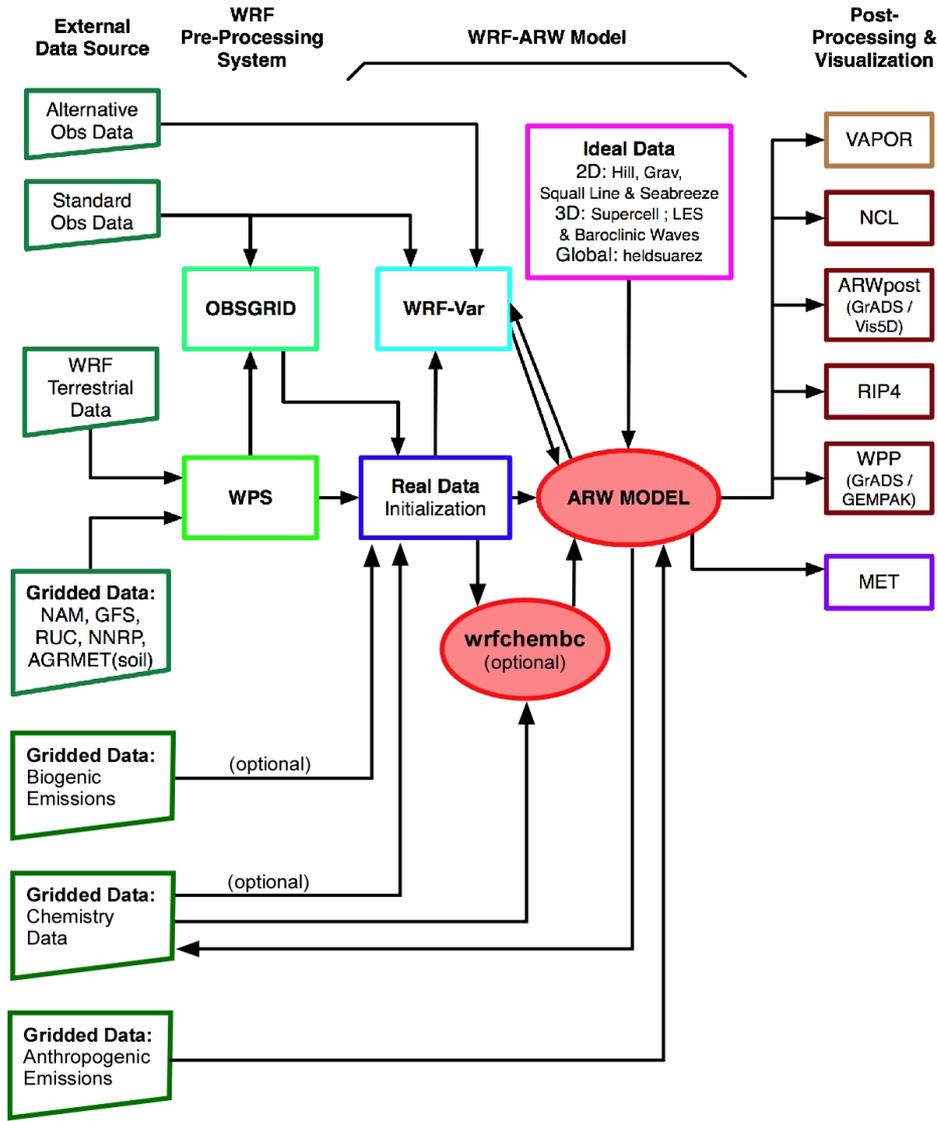

cu_rad_feedback	Description
.false.	No feedback from the parameterized convection to the atmospheric radiation and the photolysis schemes. (logical)
.true.	Feedback from the parameterized convection to the radiation schemes turned on. (logical) - use Grell cumulus scheme
progn	
0	Turns off prognostic cloud droplet number in the Lin et al. microphysics
1	Prognostic cloud droplet number included in the Lin et al. This effectively turns the Lin et al. scheme into a second-moment microphysical scheme. If set with chem._opt=0 a default prescribed aerosol concentration is used.

# WRF-Chem Namelist

cldchem_onoff	Description
0	cloud chemistry turned off in the simulation, also see the “chem_opt” parameter
1	cloud chemistry turned on in the simulation, also see the “chem_opt” parameter
wetscav_onoff	
0	wet scavenging turned off in the simulation, also see the “chem_opt” parameter
1	wet scavenging turned on in the simulation, also see the “chem_opt” parameter

# WRF-Chem Initial Conditions

WRF-ARW Modeling System Flow Chart

# WRF-Chem Chemical Data Input

- No chemical initial analysis derived from observations
  - There are no daily 3-D observations (with the exception of a few special occasions)
  - Default initial state for N. America summer (chem\_in\_opt = 0)
- Think about this problem
  - The WPS gives meteorology I.C.s
    - Numerical models assimilate observations and use old forecast data to get the initial state for weather
  - What provides the chemistry initial state?

# WRF-Chem Chemical I.C.s

- Problem: Need 3-D state of atmospheric chemistry for model initialization
  - Every 12 hours balloons used to measure state of atmosphere
    - Instruments rarely measure chemistry
      - Temperature, relative humidity, wind speed and direction
      - Occasionally measure ozone
  - No other consistent measurements of chemistry
  - Satellites measure AOD
    - Vertical integral
    - Distinguish between type (carbon, sulfate, etc.) aerosols?
- Solution: with no observations, then the old forecast is all we have for initial conditions
  - A previous WRF-Chem forecast will be best the guess for your domain initial state
  - If no forecast, then climatology will have to serve as the initial state

# WRF-Chem Chemical Data Input

- Methodology

- Set namelist option `chem_in_opt = 0`

- Idealized profile (climatology)

- Set namelist option `chem_in_opt = 1`

- Update dates/times of simulation in `namelist.input` for your forecast
    - Copy or link `wrfout` file to a “`wrf_chem_input`” data file
    - Set `auxinput12` namelist options

```
ln -s $outdir/wrfout_d01_2007-06-15-12:00:00 wrf_chem_input_d01
```

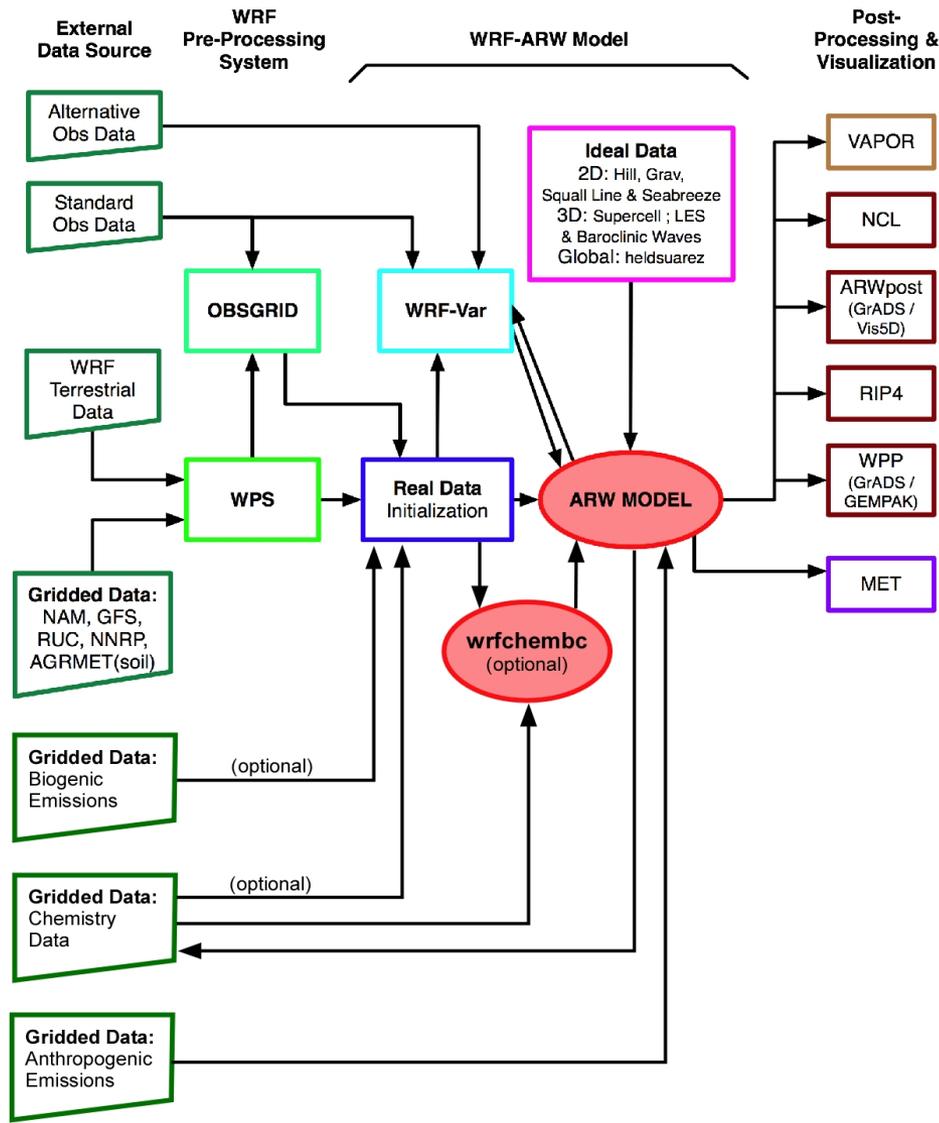

- `Real.exe` gives a message indicates that model is being initialized with previous forecast

- Do tutorial exercise 5 to better understand methodology

# WRF-Chem Simulation

## WRF-ARW Modeling System Flow Chart

# Running WRF-Chem

## Option 1: Run without chemistry

- Get copy of WRF code in your home directory
- Get WPS into your home directory
- Get initialization data (e.g., global model data)
- Build "met\_em" input data files using WPS
- Set options in namelist.input
- Run real.exe
- Run wrf.exe
- Check results

# Running WRF-Chem

## Option 2: Run with dust only (tutorial exercise 1)

- Get copy of WRF-Chem code in your home directory

```
cp -R /wrfhelp/SOURCE_CODE/WRF-CHEM/WRFV3 WRFV3
```

The tutorial code is pre-compiled (skip section 1 in the quick start guide).

- Set WPS links to include dust
  - link GEOGRID.TBL.ARW\_CHEM to GEOGRID.TBL
  - Should have EROD data
- Build "met\_em" input data files (include dust (EROD) fields)
- Set options in namelist.input
- Run real.exe with the dust only chemistry option turned on.  
(Save the wrfinput\_d01 data file for use later on. )
- Run wrf.exe and check results

# Running WRF-Chem

Option 3: Run with chemistry/aerosols (exercises 2 & 3)

- Start with WPS output and wrfinput file from option 2 then...
- Compile the prep\_chem\_sources program
- Set namelist input options (directories, on/off switches)
- Run the prep\_chem\_sources program
- Link output files to your meteorology run directory
- Retrieve the wrfinput file from your meteorology or dust only run

# Running WRF-Chem

## Option 3: Run with chemistry/aerosols (cont.)

- Set namelist options
  - Auxiliary input stream 5 for anthropogenic emissions
    - auxinput5\_interval = 60
    - io\_form\_auxinput5 = 2
    - chem\_opt = 301
    - emiss\_opt=5
    - kemit=1
    - dust\_opt=1
    - biomass\_burn\_opt=1
- Run `convert_emiss.exe`
  - Produces `wrfchemi_d01`, `wrfchemi_gocart_backg_d01`, `wrffirechemi_d01` input data files.
  - No volcanic ash emissions as `chem_opt` and `emiss_opt_vol` not set.
- Copy emissions files to `WRFV3/test/em_real` run directory

# Running WRF-Chem

## Option 3: Run with chemistry/aerosols (cont.)

- Run real.exe to include chemistry
- If including fixed surface emissions (biogenic, fire, GOCART background, etc.):
  - Set namelist options to include additional inputs
    - Auxinput6 – biogenic emissions
    - Auxinput7 – biomass burning emissions
    - Auxinput8 – GOCART background fields
    - Auxinput12 – Include previous run's chemistry fields
- After running real.exe
  - Have wrfinput\_d01 and wrfbdy files with chemistry fields
  - Should get messages showing chemistry is in run.
  - Verify data

# Running WRF-Chem

## Option 3: Run with chemistry/aerosols (cont.)

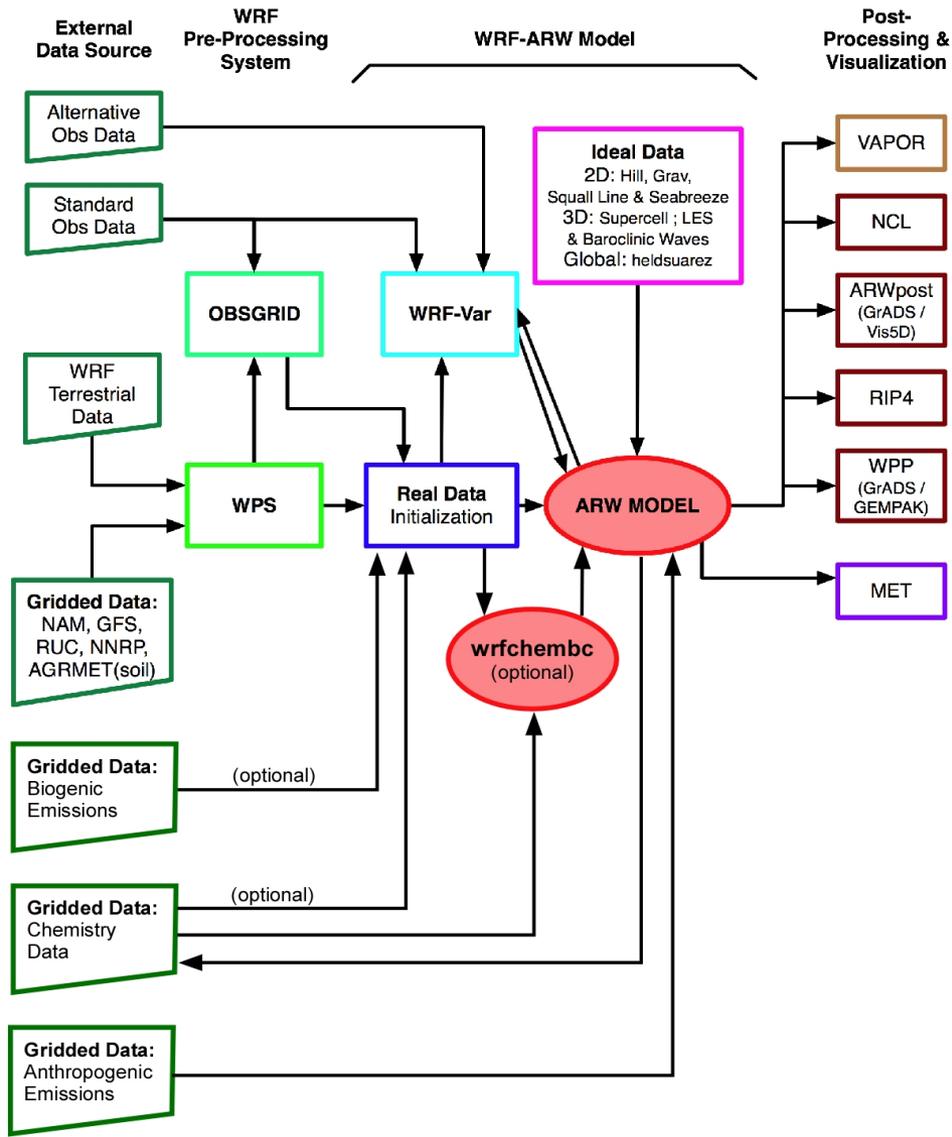

- Run wrf.exe to produce wrfout data files
  - Set namelist options to include additional inputs
    - Auxinput5 – anthropogenic emissions
  - Turn off namelist options that are excluded
    - Auxinput7 – biomass burning emissions
    - Auxinput8 – GOCART background fields
    - Auxinput12 – Include previous run's chemistry fields
  - Should get messages regarding the reading of
    - Anthropogenic emissions
    - If you do not get these messages, an error is likely

# After Running WRF-Chem

- And still other options (tracer, volcano, etc.)
- For any of the run time options
  - Check the text output
    - Make sure you are getting the messages you expect
    - Look for any warning/error messages
  - Check the model output (ncview)
    - Confirm that emissions data is being read into simulation
      - Error in kemit will result in no anthropogenic emissions data
      - Error in chem\_opt, io\_form\_auxinput5?
      - Other namelist options correct so you have data?
        - »  $\text{Max}\langle\text{some array}\rangle = 1.e-16$  is not data. It is noise.
  - Make plots of simulation results

# WRF-Chem Visualization

WRF-ARW Modeling System Flow Chart

# WRF-Chem Visualization

- Your favorite netCDF data file viewer to examine results
  - ncview, ncbrowse, etc.
- Other standard WRF visualization tools work with the chemistry variables as well as the meteorology
  - ARWpost (NCL, VIS5D)
  - Grads
  - Etc.

# WRF-Chem Exercises

- Now you do it! Several exercises are located on the WRF-Chem web page (linked on tutorial web page).

Exercises start simple and build on complexity in each subsequent exercises (add in anthropogenic emissions, biogenic emissions, etc.) so do each one in order.

- 1 – Dust only simulation
  - Use global dust erosion data set
  - July 2010 dust transport event
  - Mediterranean basin domain location
- 2 – Global emissions
  - Includes building GOCART, biomass burning emissions
  - Most likely choice for domains outside USA

# WRF-Chem Exercises

- 3 – RADM2 chemistry with MEGAN biogenic emissions

- 4 – Full interactive physics
  - Understand namelist.input choices as domain too coarse to get significant impact

- 5 – Cycle (recycle?) chemistry
  - Understand methodology to obtain “best” chemical initial conditions

# WRF-Chem Exercises

- 6 – Volcanic emissions

- 7 – Using external program to build chemistry lateral BC
- Use the User's Guide (and ask for help) during practice
- Work tutorial problems
  - No time/resources to conduct your own research project
  - 99.9% of time questions can be answered by working tutorial exercises

# WRF-Chem Exercises

- Start now!
  - Work at your own pace
  - During practice remember to use
    - Notes, lecture information
    - Tutorial exercise page
    - User's Guide
    - And ask for help if you get stuck
  - Work tutorial problems only
    - No time to conduct your own research project
    - Most questions will be answered by doing the tutorial exercises
